

Engine Shed

The Engineering Department restores and maintains the Steam and Diesel Locomotives on the Strathspey Railway, in the original 1898 Steam Shed at Aviemore.

The tasks tackled range from oiling and greasing to major rebuilds -maybe taking years.

Some of the skills utilised – machine tool operation, hand fitting, steel fabrication, welding, diesel/steam mechanics, hydraulics/pneumatics and even if you can use a wire brush to clean components all the better. Juveniles under supervision are more than welcome.

If you are interested in volunteering in the Engine Shed contact -
